AMENDMENTS TO THE CLAIMS

(Currently amended) A printing method, comprising the steps of:
receiving <u>print stream</u> data adapted to contain a network address, at a printer;
determining whether a URL or external network option is enabled;
detecting if a network address is in the received data;

sending on the Internet or other network, an access request to an administrative control entity separate and distinct from a user entity instigating the print stream data, for a document to the network address;

retrieving the document from the network address in the instance the administrative control entity grants the access request;

merging the document from the network address into the print stream data to form a modified document; and

printing the modified document.

- 2. (Original) The method as defined in claim 1, wherein the external network address is a URL.
- 3. (Previously presented) The method as defined in claim 1, wherein the step of detecting a network address comprises detecting a barcode in the received data and translating the barcode to the network address.
- 4. (Original) The method as defined in claim 3, wherein, if the URL or other external access option is not enabled, then printing the untranslated barcode.
- 5. (Original) The method as defined in claim 1, further comprising the step of enabling/disabling the URL or external network access option.
- 6. (Currently amended) The method as defined in claim 1, further comprising the step of presenting a display to a user or the administrative control entity to enable/disable the URL or external network access option.

- 7. (Original) The method as defined in claim 6, wherein the display is provided from a printer driver.
- 8. (Currently amended) The method as defined in claim 1, further comprising the step of enabling/disabling the URL or external network access option from a control panel at the discretion of the administrative control entity.
- 9. (Original) The method as defined in claim 8, wherein the control panel is at the printer.
- 10. (Currently amended) The method as defined in claim 8, wherein the control panel is at a remote administrator administrative control entity location.
- 11. (Currently amended) The method as defined in claim 10, further comprising the step of sending of a user name or password to the remote administrator administrative control entity location.
- 12. (Original) The method as defined in claim 1, further comprising the step of automatically enabling/disabling the URL or external network access option based on a criteria.
- 13. (Original) The method as defined in claim 12, wherein the criteria is whether the URL or external network device meets a security requirement.
- 14. (Original) The method as defined in claim 13, wherein the security requirement is the receipt of an authorized user name and/or password.
- 15. (Original) The method as defined in claim 1, wherein said receiving data step comprises receiving an e-mail containing said data.
- 16. (Original) The method as defined in claim 1, wherein said receiving data step comprises receiving an e-mail with an attachment containing said data.

- 17. (Original) The method as defined in claim 3, wherein said translating step comprises translating the barcode to obtain a PIN#; and wherein said sending step includes sending the PIN# with the access request to the external network address for determining if the request is authorized.
- 18. (Original) The method as defined in claim 1, wherein the detecting a network address step comprises interpreting a wrapper indicating that the wrapped data is a barcode.
- 19. (Original) The method as defined in claim 3, wherein the translated barcode includes information on printing the document inside another document; and further comprising the step of printing the document inside the other document in accordance with the printing information upon receipt of the document at the printer.
- 20. (Original) The method as defined in claim 1, further comprising the step of printing the document inside a master document.
- 21. (Original) The method as defined in claim 20, wherein the detecting of a network address step further comprises

obtaining at least one identifier that designates the type of contents in said document; and

determining a location of the document within the master document based on said identifier.

22. (Currently amended) A program product including machine readable program code for causing a machine to carry out the following method steps:

receiving <u>print stream</u> data adapted to contain a network address at a printer; determining whether a URL or external network option is enabled; detecting if a network address is in the received data;

sending on the Internet or other network an access request to an administrative control entity separate and distinct from a user entity instigating the print stream data, for a document to the network address;

retrieving the document from the network address in the instance the administrative control entity grants the access request;

merging the document from the network address into the print stream data to form a modified document; and

printing the modified document.

- 23. (Original) The program product as defined in claim 22, wherein program code for performing the detecting a network address step comprises program code for detecting a barcode in the received data and translating the barcode to the network address.
- 24. (Currently amended) A program product, including machine readable program code for causing a machine to carry out the following method steps:

receiving print stream data at a printer;

determining whether a URL or external network option is enabled;

detecting if a network address is included in the received data;

sending on the Internet or other network an access request to an administrative control entity separate and distinct from a user entity instigating the print stream data, for a document to the network address;

retrieving the document from the network address in the instance the administrative control entity grants the access request;

merging the document from the network address into the print stream data to form a modified document; and

printing the <u>modified</u> document; and further comprising program code for performing the step of enabling/disabling the URL or external network access option.

25. (Currently amended) A printing method, comprising the steps of: determining if a network address is contained in <u>print stream</u> data received at a printer;

determining whether a URL or external network option is enabled;

sending on the Internet or other network an access request to control entity separate and distinct from an entity instigating the print stream data, for a document to the network address:

retrieving the document from the network address in the instance the administrative entity grants the access request;

merging the document from the network address into the print stream data to form a modified document; and

using the printer to printing the modified document.

26. (Currently amended) A program product including machine readable program code for causing a machine to carry out the following method steps:

determining if a network address is included in <u>print stream</u> data received at a printer;

determining whether a URL or external network option is enabled;

sending on the Internet or other network an access request to an administrative control entity separate and distinct from a user entity instigating the print stream data, for a document to the network address;

retrieving the document from the network address in the instance the administrative entity grants the access request;

merging the document from the network address into the print stream data to form a modified document; and

using the printer to printing the modified document.
